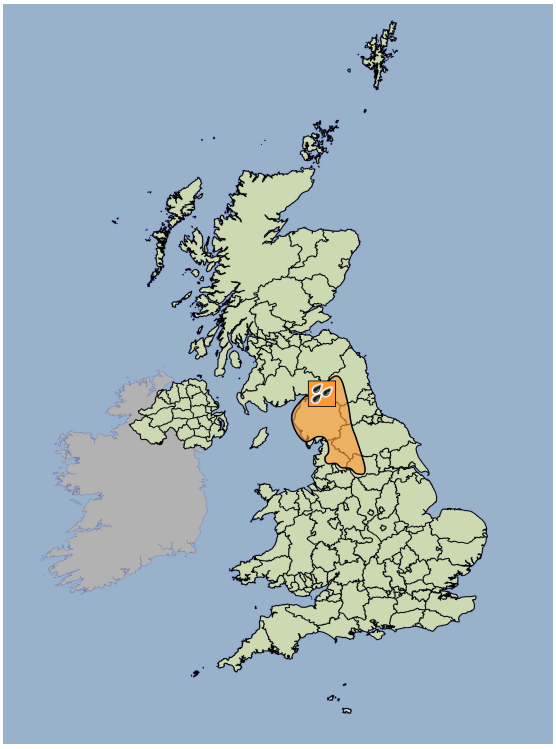
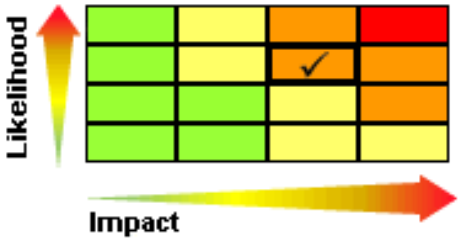
National Severe Weather Warning Service





Chief Forecasters Assessment
A strong, moist westerly to southwesterly flow will last through most of Sunday before a cold front moves east around midnight, leading to a clearance of the heavy rain by the early hours of Monday. A further 20-30 mm of rain is likely with 40-50 mm in prone high ground areas. This rainfall, falling onto already saturated ground, is likely to lead to further flooding.

The Met Office have issued an **Amber Warning** of **Rain**

Valid from **10:20 on Sun, 15th Nov 2015** until **23:45 on Sun, 15th Nov 2015**

Further heavy rain is expected across the area this afternoon, easing for a time late afternoon and early evening, before turning heavy again late evening, finally clearing from the west by the early hours of Monday.

Continue to be prepared for flooding to occur, the impacts exacerbated by the fact that we have seen heavy rainfall overnight and ground conditions are saturated.

This is an update to the warning to remove South Yorkshire and Greater Manchester from the Amber area (also see Yellow Warning) and to reduce the impacts from high to medium.
